

This service facilitates machine-to-machine access to aviation weather information. These pages describe how to use the API and the interactive interface under Specifications can be used to learn more about available data, configure specific queries, and try them out. The weather database currently allows access to up to the previous 15 days of data.

Please keep requests limited in scope and frequency. Maximum results per query apply as well as rate limiting against frequent requests. For larger queries, please consider using the [cache files](#) which provide quick access to complete datasets.

Products

Product	Description	Coverage	Formats
METAR	Terminal observations	Worldwide	Raw text, JSON, GeoJSON, CSV, XML, IWXXM
TAF	Terminal forecasts	Worldwide	Raw text, JSON, GeoJSON, XML, IWXXM
PIREPs/AIREPs	Pilot and aircraft reports	Primarily US and North Atlantic	Raw text, JSON, GeoJSON, XML
SIGMETs	Aviation warnings	Worldwide	Raw text, JSON, GeoJSON, XML
G-AIRMETs	Aviation advisories	Contiguous 48 United States	JSON, GeoJSON, XML
AIRMETs	Aviation advisories	Alaska	JSON, GeoJSON, XML, IWXXM
<i>CONUS text AIRMETs were discontinued in January 2025. G-AIRMETs replace AIRMETs, increasing forecast precision in both time and space.</i>			
Area Forecast	Aviation forecasts	Alaska	Text
Area Forecast Discussions	Aviation discussions	United States	Text
Center Weather Advisories	Regional aviation advisories	United States	Raw text, JSON, GeoJSON
Meteorological Impact Statements	Aviation statements	United States	Text
TFM Convective Forecast (TCF)	Convective forecast	United States, portions of Canada	Raw text, GeoJSON
Legacy wind/temp tables	Wind and temperature forecasts	United States	Text
Station info	Weather observation station information	Worldwide	JSON, GeoJSON, XML
Airport info	Airport information	Worldwide	JSON, GeoJSON, XML
NAVAID, fix, feature, obstacle	Aviation navigation features	Worldwide	JSON, GeoJSON, XML
